

A close-up photograph of a woman with a bright, joyful smile. Her hands are raised, with her fingers pointing towards her eyes, framing her face. She is wearing a white, off-the-shoulder top. The background is a bright, out-of-focus outdoor setting, likely a beach or a sunny outdoor area. The overall mood is positive and happy.

Z1[®] implant

Unique, like your smile

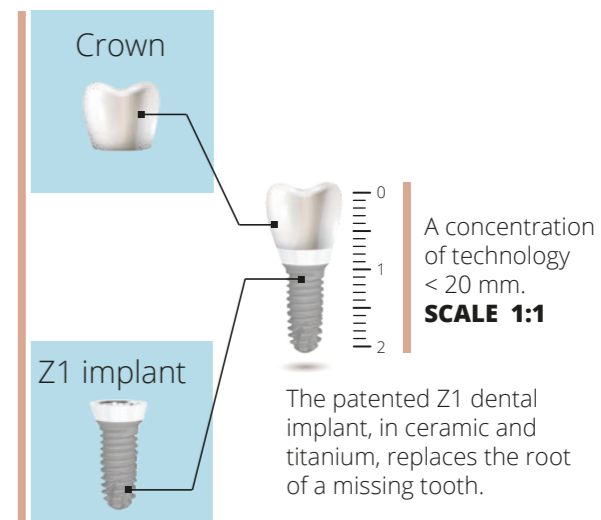

Why choose the Z1?

The replacement of missing teeth with titanium dental implants has been possible since the '80s. It is very often a suitable alternative to bridges, which sometimes require removal of enamel from some of the healthy surrounding teeth.

Today, only the Z1 offers an aesthetic, protective and long-lasting solution thanks to the ceramic material at gum level, which mimics the colour of natural teeth.

That is why it is unique, like your smile.

- ✓ Aesthetic role: totally invisible.
- ✓ Functional role: support for the crown.
- ✓ Clinical role: protection against bacteria.
- ✓ Alternative to mutilating bridges.
- ✓ Over 20 years of clinical experience.

Z1® implants - Certificate of Authenticity

Z1 implants are designed, manufactured and packaged in accordance with the European and international regulations. After your intervention, your practitioner will hand you your product Certificate of Authenticity.

Z1® implant

The aesthetic and protective implant

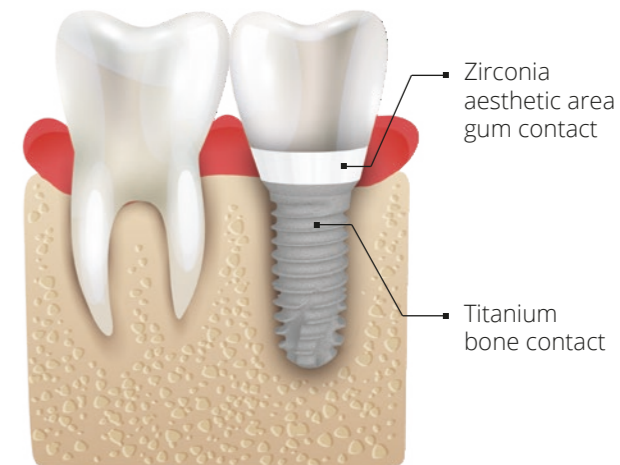

Zirconia: an aesthetic and antibacterial ceramic shield.

Only one intervention is needed for implant placement.

- ✓ Optimal aesthetic: no grey gum.
- ✓ Faster healing and long-lasting results.
- ✓ Enhanced post-operative comfort.
- ✓ Prevention of plaque formation.

Unlike other dental implants, which often require several surgeries, the Z1 implant usually requires only one. The Z1 combines two biocompatible materials – ceramic and

titanium – for better healing and improved long-term success of treatment. The Z1 implant is placed in a single intervention, thus protecting the gums from repeated trauma.

Your frequently asked questions

Q How can I find out if **I am suitable** for Z1 implants?

R **Ask your dentist**, they will be able to propose a treatment plan in order to improve your smile with the Z1 implants.

Q Is placing a dental implant **painful**?

R **No**, the placement of a Z1 implant is less painful than a tooth extraction and is carried out under local anaesthesia.

Q **How long** does it take to obtain a beautiful smile?

R You will be able to get back to your normal life a few hours after the surgical appointment. Final crowns are generally placed **3 to 4 months later**.

Q **How much does it cost** to obtain my dream smile?

R The cost varies according to the complexity of the case. Generally, the cost of a Z1 implant treatment is **comparable to the average price of a bridge**.

Q **From what age** can I have Z1 implants?

R The **final growth of your jawbones** should be reached before placing Z1 implants.

Q **How long** do Z1 implants last?

R Z1 implants have been tried... and tested for over 20 years and their reliability is confirmed by numerous scientific references. With regular dental checkups, they can last for **several decades**.

So, when do you start?

Thousands of patients around the world choose the Z1 implants because they want the best solution available for their smile. **How about you?**
